Art Unit: 2835

1. The 4-21-03 drawings are acceptable.
2. The 7-11-03 amendment has been entered.
3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Direct contact is recited between the die and spreader. However, material 60 appears to intervene. The claims are therefore confusing and misdescriptive. Please discuss how direct contact is possible.

5. All claims 1-23 are again rejected under 35USC102 and 103 as explained in paragraphs 11-14 of the first office action, and again repeated in the final rejection. Most of applicant's arguments go to the direct contact issue. However, it is not clear from the above 112 rejection that applicant actually has direct contact.

It is further argued concerning Gregory that coating 41 is on the sink, not the spreader. However, since the sink also spreads the heat, it is also a spreader in the broad sense. Concerning Solberg and Kester, these references are mentioned by saying they lack the claimed elements. Such appears to argue a 102 rejection, however a 103 rejection is applied.

6. Claims 8,9,13,15,17,20 and 22 are rejected under 35 U.S.C. 102(e) as being anticipated by Chien (pgpub 2002/0009826, already of record).

Art Unit: 2835

Thermal compound 88 and ink 92(see page 5 explanation of the reference) are clearly shown between spreader 64 and die 68. All else is clearly shown. Polyolefin or triazine are used as thermally conductive adhesive.
